2011 Annual Drinking Water Quality Report

(Consumer Confidence Report - PWS TX 0710005)

HORIZON REGIONAL MUD (915) 852 3557

This Annual Water Quality Report is for the period of January 1 to December 31, 2011.

This report is intended to provide you with important information about your drinking water and the efforts made by Horizon Regional MUD to provide safe drinking water.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

For more information regarding this report contact: Toby Alvarado at 915-852-3557.

Public Participation Opportunities

To obtain information and participate in discussions with the Board Members of Horizon Regional MUD, you are invited to attend the monthly Board of Director's Meeting held every fourth Thursday of the month at 6:00 P.M. at 14100 Horizon Blvd., Horizon City, TX 79928 or call (915) 852-3557

Este informe contiene información muy importante sobre el agua que usted bebe. Tradúzcalo ó hable con alguien que lo entienda bien, o favor de llamar al tel. (915) 852-3557 para hablar con una persona bilingüe en español.

SPECIAL NOTICE

Required language for ALL community public water supplies:

Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care provider. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at (800) 426-4791.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Secondary Constituents

Many constituents (such as calcium, sodium, or iron) which are often found in drinking water, can cause taste, color, and odor problems. The taste and odor constituents are called secondary constituents and are regulated by the State of Texas, not the EPA. These constituents are not causes for health concern. Therefore, secondaries are not required to be reported in this document but they may greatly affect the appearance and taste of your water.

The Source of Drinking Water used by Horizon Regional MUD is Ground Water.

A Source Water Susceptibility Assessment for your drinking water sources(s) is currently being updated by the Texas Commission on Environmental Quality. This information describes the susceptibility and types of constituents that may come into contact with your drinking water source based on human activities and natural conditions. The information contained in the assessment allows us to focus source water protection strategies.

For more information about your sources of water, please refer to the Source Water Assessment Viewer available at the following URL: <a href="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/Controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/controller/index.jsp?wtrsrc="http://gis3.tceq.state.tx.us/swav/controller/index.jsp."http://gis3.tceq.state.tx.us/swav/controller/index.jsp."http://gis3.tceq.state.tx.us/swav/controller/index.jsp."http://gis3.tceq.state.tx.us/swav/controller/index.jsp."http://gis3.tceq.state.tx.us/swav/controller/index.jsp."http://gis3.tceq.state.tx.us/swav/controller/index.jsp.
http://gis3.tceq.state.tx.us/swav/controller/index.jsp.

Further details about sources and source-water assessments are available in Drinking Water Watch at the following URL: http://dww.tceq.texas.gov/DWW/

Information of Sources of Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of
 industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff,
 and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

Water Quality Test Results

- Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- Maximum residual disinfectant level goal or MRDLG: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- Maximum residual disinfectant level or MRDL: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- Avg: Regulatory compliance with some MCLs are based on running annual average of monthly samples.
- ppm: milligrams per liter or parts per million or one ounce in 7,350 gallons of water.
- ppb: micrograms per liter or parts per billion or one ounce in 7,350,000 gallons of water.
- na: not applicable.

Definitions: The following tables contain scientific terms and measures, some of which may require explanation.

Disinfectant Residual Reporting

Year	Disin- fectant	Avg. Level	Min. Level	Max. Level	MRDL	MRDLG	Unit of Measure	Source of Chemical
2011	Chlorine Gas	1.57	0.80	2.30	4.0	<4.0	ppm	Disinfectant used to control microbes.

Lead and Copper

Definitions:

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.

Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90th Percentile	# Sites Over AL	Units	Violation	Likely Source of Contamination
Copper	11/2010	1.3	1.3	0.17		ppm	N	Erosion of natural deposits; Leaching from wood preservatives; Corrosion of household plumbing systems.
Lead	11/2010	0	15	0.52		ppb	N	Corrosion of household plumbing systems; Erosion of natural deposits.

Regulated Contaminants

Disinfectants and Disinfection By- Products	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Haloacetic Acids* (HAA5)*	03/16/11	6	6.2 6.2	No goal For the total	60	ppb	N	By-product of drinking water Chlorination.
Total Trihalomethanes (TThm)*	03/16/11	5	4.5 - 4.5	No goal For the total	80	ppb	N	By-product of drinking water Chlorination.

^{*}Not all sample results may have been used for calculating the Highest Level Detected because some results may be part of an evaluation to determine where compliance sampling should occur in the future.

Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Arsenic **	03/16/11	10	10 - 10	0	10	ppb	N	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production waste

^{**} While your drinking water meets EPA standards for arsenic, it does contain low levels of arsenic. EPAs standard balances the current understanding of arsenics possible health effects against the costs of removing arsenic from the drinking water. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin disease.

Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Barium	03/16/11	0.03	0.03 - 0.03	2	2	ppm	N	Discharge of drilling waste; Discharge from metal refineries; Erosion of natural deposits
Chromium	03/16/11	6.2	6.2 – 6.2	100	100	ppb	N	Discharge from steel and pulp mill; Erosion of natural deposits
Fluoride	03/16/11	0.68	0.68 - 0.68	4	4.0	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
Nitrate *** (measured as Nitrogen)	03/16/11	5	0.35 - 4.71	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.

^{***} Nitrate in drinking water at levels above 10 ppm is a health risk for infants of less than six months of age. High nitrate levels in drinking water can cause blue baby syndrome. Nitrate levels may rise quickly for short periods of time because of rainfall or agricultural activity. If you are caring for an infant you should ask advice from your health care provider.

Selenium	03/16/11	5.49	5.59- 5.49	50	50	ppb	N	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines
Thallium	03/16/11	0.606	0.606 - 0.606	0.5	2	ppb	N	Discharge from electronics, glass, and leaching from ore processing sites, drug factories

Radioactive Contaminants

Definitions:

Picocuries per Liter or pCi/L: A unit of radioactivity corresponding to one decay every 27 seconds in a volume of one liter

Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Beta/photon emitters	03/16/11	6.2	6.2 - 6.2	0	50	pCi/L	N	Decay of natural and man-made deposits
Gross alpha excluding radon and uranium	03/16/11	7.9	7.9 – 7.9	0	15	pCi/L	N	Erosion of natural deposits
